## 6.5%

### Global unemployment rate

---

A 6.5% unemployment rate in the world means that roughly 267 million people are without work. This number is significant and has far-reaching implications for both individuals and society as a whole. Unemployment can lead to poverty, mental health issues, and social unrest. It also has an impact on economic growth and stability.

In addition to the staggering unemployment rates around the world, poverty is also a major issue affecting millions of people. According to the World Bank, over 700 million people live in extreme poverty, surviving on less than \$2.15 a day. In the US alone, nearly 38 million people live in poverty.
